

Midway Progress

(Inventory Management System)

Group Members:

Muhammad Faizan Mughairi

Kabeer

Osama Athar

The project is an inventory management system, and so far, we have implemented the basic functionality that allows the user to interact with the system. This has been achieved using a combination of a switch case and a while loop, enabling the user to make choices repeatedly until they press 3 to exit the loop.

Remaining Task:

calculations

user defined functions

file handling
